Fund commentary

Minimum disclosure document (MDD)
Global - Equity - General

2nd Quarter 2025

Market performance

Global markets rose strongly in June despite a cocktail of geopolitical tensions and policy risk and the potential for simultaneous supply shocks from tariffs, migration constraints and rising oil prices. Iran and Israel agreed to a ceasefire after 12 days of intense missile and drone strikes between Iran and Israel, and just one day after US operation “Midnight Hammer”, which “obliterated” Iran’s three uranium nuclear sites, including Fordow, a uranium-enrichment facility buried deep in a mountain. The ceasefire brought relief to the oil markets. While the conflict in the Middle East increases geopolitical risk, the ceasefire renders the impact of tariffs on US growth and inflation the greater uncertainty, with the 90-day tariff pause granted by the US expiring on 9 July. Trump has warned that countries will receive a “take-it-or-leave-it” letter detailing tariff terms, though the 15 countries already engaged in negotiations with the US may see this an extension to the deadline. Tariff pass-through inflation in the US was minimal in May, but corporates are likely to begin passing costs on to consumers, with inflationary consequences over the coming quarters reinforcing expectations of “higher for longer” interest rates and reduced growth. The World Bank concurred in its June outlook, downgrading its 2025 global growth forecast by 0.5 percentage points to 2.3%, projecting the weakest non-recessionary growth since 2008. Looking further ahead, average global growth in the 2020s is expected to settle around 2.5% – its slowest pace since the 1960s. Developed markets will bear the brunt of the growth downgrade and inflation increase, while emerging markets (EMs) will continue to offer a relatively resilient inflation–growth trade-off.

US inflation data for May offered a reprieve, rising by less than expected for the fourth consecutive month. While US firms have passed on some of the recent tariff costs – particularly on goods heavily exposed to China, such as appliances, electronics and household equipment – the full effect will take two to three months to unfold. In addition, CPI surprised to the downside due to price declines in recreational services and durable goods which signal growing consumer caution. Subdued inflation offers breathing room, but it is ultimately a function of softer economic activity. Weak May retail sales, falling consumer confidence and continued softness in manufacturing data indicate slowing demand. The Yale Budget Lab estimates that the current 15%+ effective tariff rate could reduce year-end employment by 375 000 jobs. Jobless claims have risen to a three-and-a-half-year high, while non-farm payroll growth outside two core categories has stalled.

The European Central Bank expects GDP growth of just 0.9% in 2025, but even that may be optimistic. Exports are weakening sharply, particularly as frontloading of US trade to avoid tariffs normalises, and the Russia-Ukraine war is continuing, sustaining geopolitical and energy-related pressures. Trump-era tariff risks are also escalating, with the US indicating that trade negotiations with the EU may not be resolved by the 9 July deadline. The EU’s slow pace of trade negotiation – seen clearly during Brexit – exacerbates the risk that the bloc may bear a disproportionate burden of any new US tariffs.

China’s economy is gaining traction, with early signs that policy stimulus is finally filtering through to the real economy: money growth is accelerating and May retail sales rose to a 17-month high. Beyond China, EMs are capitalising on trans-shipment opportunities, firm commodity prices, a weakening US dollar, low inflation and resilient earnings growth.

The gazetting in South Africa of new information technology (IT) procurement rules in June means that government departments can finally access IT services without having to use the State Information Technology Agency (SITA). In other good news, the Financial Action Task Force (FATF) has made an initial determination that SA’s 22-point action plan is complete, granting SA an on-site assessment and paving the way for SA to be removed from the so-called grey list at the FATF’s October plenary. However, the Organisation for Economic Co-operation and Development note that Transnet and a general lack of reforms are causing SA to miss out on the commodity rally (“Q1.25 growth stalled at 0.1% qsqsa as the ongoing incapacity at Transnet severely limits growth”). This was confirmed as mining production declined by a marked -7.7% y/y in April, following March’s -2.5% y/y contraction. Production faces a myriad of challenges, including heightened input costs, labour challenges, the effects of illegal mining and logistical bottlenecks. The pace of reforms will affect SA’s ability to break out of the 1% growth range.

The dollar is usually the beneficiary in times of fear, but it has not rallied with current geopolitical tensions. Rate cuts in Europe may end soon even as the Fed starts to cut, so the euro may find further short-term cyclical support relative to the dollar. Despite dollar weakness and global appetite for currency diversification, however, the euro is unlikely to deliver on its “reserve currency moment” for some time.

Overall, the global consumer remains in good shape, financial conditions have eased and US long-term inflation expectations are stable, so we still expect the US to avoid a recession. In addition, we expect the near-term fiscal thrust in Germany and China to be around 2% of GDP. However, markets are entering a precarious period in which geopolitical risk, trade fragmentation and supply shocks intersect.

A combination of domestic tailwinds, global supply chain realignment and policy flexibility is positioning EMs for stronger near-term performance. China’s cyclical rebound, coupled with opportunities in EM debt and equity, present a compelling case for diversified exposure in multi-asset portfolios. Global industrial metal prices are also benefiting from the rise in global defence spending, a further tailwind for commodities and emerging markets. We have switched some of our South African exposure to EMs given the better valuations, higher growth and greater diversification.

TIME HORIZON

Fund performance

The Sygnia Itrix FANG.AI Actively Managed ETF delivered a return of 24.3% for the quarter measured in rand terms, slightly underperforming the fund’s benchmark. This performance was driven by significant strength in the US technology sector, while the appreciation of the South African rand relative to the US dollar detracted from the performance of the fund.

The fund’s allocation to artificial intelligence chip design and manufacture through companies like Nvidia and Broadcom were the largest contributors to performance, with gains of 46% and 65% respectively during the quarter. Other significant contributions came from Netflix, which saw positive user numbers, and CrowdStrike, both gaining 44% for the quarter.

Apple was the only constituent company to detract from performance, its share price down 8% over the quarter.

Major technology companies continue to make significant investments in cloud computing and related services, which represent a growing source of long-term revenue. These companies are at the forefront of innovation and consistently demonstrate strong financial performance, supported by large pools of capital and increasingly leveraging artificial intelligence (AI) and machine learning (ML) to develop powerful tools and services that enhance their customer offerings.

The fund has stayed true to its objective of providing investors with exposure to some of the most advanced US technology companies, focusing on areas like AI, cloud computing and online services.

Sygnia

Important information to consider before investing

Investment Approach

The objective of the Sygnia Itrix FANG.AI Actively Managed ETF is to provide a simple vehicle to investors who wish to gain investment exposure to companies which use advanced technologies to acquire and retain users, including industry disrupting technologies such as artificial intelligence, large language models, cloud storage, big data, social media, and e-commerce tools. The portfolio is actively managed and its holdings will depend on a number of factors including the underlying benchmark which is the NYSE® FANG+™ Index (although the portfolio is not obliged to hold all the benchmark constituents).

Balancing risk and reward

The fund has a high risk profile, as it is predominantly invested in global equities, which combines both equity market and currency risks. Furthermore, the fund invests specifically in companies involved in new and emerging technologies, which have a high degree of volatility. Risk is also high as the fund is a concentrated portfolio, with the fund's benchmark comprised of only ten shares. Effective exposure of the portfolio invested outside South Africa will always be above 80%, and is affected by, among other factors, general market risk, exchange rate risk, interest rate risk, liquidity risk and legal and regulatory risk.

Annualised performance figures represent the geometric average return earned by the fund over the given time period.

Performance is calculated based on the NAV to NAV calculation of the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date and dividend withholding tax.

Index Disclaimer

NYSE® FANG+™ Index (the “Index”) is a product of ICE Data Indices, LLC (“ICE Data”) and is used with permission. ICE® is a registered trademark of ICE Data or its affiliates. ICE Data, its affiliates and their respective third party suppliers disclaim any and all warranties and representations, express and/or implied, including any warranties of merchantability or fitness for a particular purpose or use, including the indices, index data and any data included in, related to, or derived therefrom. Inclusion of a security within an index is not a recommendation by ICE Data to buy, sell, or hold such security, nor is it considered to be investment advice. ICE Data, its affiliates and their respective third party suppliers do not sponsor, endorse, or recommend Sygnia Asset Management (Pty) Ltd (FSP 873), or any of its products or services.

Fees

Sygnia Itrix AMETFs are Actively Managed Exchange Traded Funds that trade on stock exchanges and may therefore incur additional costs associated with listed securities. Sygnia Itrix does not provide advice and therefore does not charge advice fees. A schedule of fees and charges is available on request from Sygnia Itrix. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees.

What is the Total Expense Ratio (TER) and Transaction Costs (TC)?

The total expense ratio (TER) is the annualised percentage of the fund's average assets under management that has been used to pay the fund's actual expenses over the past three years. Transaction costs are a necessary cost in administering the fund and impact fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since fund returns are quoted after the deduction of these expenses, the TER and Transaction Costs should not be deducted again from the published returns. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return.

Cumulative Investment Performance

Cumulative investment performance is for illustrative purposes only. The investment performance is calculated by taking all ongoing fees into account for the amount shown, with income reinvested on the reinvestment date.

How are NAV prices calculated?

Net Asset Value (NAV) prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. The price at which ETFs trade on an Exchange may differ from the NAV price published at the close of the trading day, because of intraday price movements in the value of the constituent basket of securities.

Disclaimer

The Sygnia Group is a member of the Association for Savings and Investment SA. Sygnia Itrix (RF) (Pty) Ltd is a registered and approved Manager under the Collective Investment Schemes Control Act, 2002. Sygnia Asset Management (Pty) Limited (FSP 873), an authorised Financial services provider, is the appointed investment manager of the Fund. Sygnia Itrix does not provide any guarantee with respect to the capital or return of the portfolio. Collective Investment Schemes (CIS) are generally medium to long-term investments. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending.

The value of investments/units may go down as well as up and past performance is not necessarily an indicator of future performance. AMETFs trade on stock exchanges and may therefore incur additional costs associated with listed securities. Unlike a unit trust, which can be bought or sold only once per day, an AMETF can be traded intraday, during exchange trading hours.

AMETFs may invest in foreign securities, which may be exposed to macroeconomic, settlement, political, tax, liquidity, and foreign exchange risks. Performance is calculated for the portfolio, and the individual investor performance may differ as a result of trading cost, price paid for investment share.

Additional information on the Index including its performance and tracking error can be viewed on the relevant Minimum disclosure document (MDD) on www.sygnia.co.za. A schedule of fees, charges and where the AMETF engages in securities lending activities, information on such securities lending activities may be requested via admin@sfs.sygnia.co.za or 0860 794 642.

The complete terms and conditions of your AMETF investment are contained in the fund's offering circular, pre-listing statement, programme memorandum and/or supplemental deed and index constituents with prices are published daily on Sygnia's website. The documents/information may be obtained from www.sygnia.co.za or on request from Sygnia.

Nothing in this document shall be considered to state or imply that the Fund is suitable for a particular type of investor. All the portfolio options presented are approved collective investment schemes in terms of the Collective Investment Schemes Control Act, No 45 of 2002 (“CISCA”). The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates.
