## Fund commentary

Minimum disclosure document (MDD)  
Class B  
South African - Equity - SA General

3rd Quarter 2025

### Market performance

The gold price surged more than 10% in September on the risk of a US government shutdown, pushing the real (inflation-adjusted) gold price to an all-time high. Gold's weighting has reached 15% of the JSE All Share Index, nearly three times its 2006 peak; including platinum group metals, total precious metals now account for 22% of the SA equity market, pushing the South African resources sector to more than double year to date. Gold previously performed well in the 2018/2019 US shutdown, and the short-term rise in gold has likely been driven by investors seeking safe haven. Beyond the shutdown, emerging market central banks are likely to continue to buy gold and President Trump will continue his attacks on the Fed, so gold's rally is likely to continue. However, the stretched price of gold has raised the risk of a short-term reversal.

The Fed lowered interest rates by 25 basis points, marking its first rate cut in 2025 amid emerging signs of a softening in the labour market. However, the Fed's Summary of Economic Projections (SEP) for 2026 showed an upgrade in growth expectations, raising GDP growth from 1.6% to 1.8%, increasing core personal consumption expenditure (PCE) inflation forecasts from 2.4% to 2.6% and lowering the unemployment rate from 4.5% to 4.4%. The combination of a rate cut alongside upgraded growth and inflation forecasts has raised investor concerns about Fed credibility and dollar debasement. Fed Chair Jerome Powell described September's rate cut as "risk management", but Bloomberg Economics suggests political pressure may have influenced the decision. The SEP and Fed rate cut forecasts suggest a Fed inflation target around 2.8%, higher than the Fed's official 2% target, raising the risk that this implicit inflation bias could shift even higher as the composition of the Federal Open Market Committee changes under Trump. Without political pressure, deep cuts are unlikely. Although the 5 September payroll report showed a significant drop in employment growth, the unemployment rate only ticked up slightly, to 4.3% – breakeven payroll gains (jobs needed to keep unemployment stable) have dropped as a result of a shrinking labour force caused by lower participation and the increased deportation of undocumented workers. The full impact of the increased deportation of undocumented workers may not yet reflect in the data, so the slowdown in labour supply may be greater than reported. This could push wages higher, which, alongside tariff-driven inflation, would likely reduce rate cuts.

While inflation rose less than expected, to 3%, the South African Reserve Bank (SARB) kept rates unchanged, with SARB governor Lesetja Kganyago blaming "the serious dysfunction in administered prices, which undermines purchasing power and weakens growth. The solution to this crisis is not a higher level of inflation, but rather sector-specific reforms to improve efficiency."

Infrastructure is a glaring weakness for South African competitiveness. Theo Boshoff, CEO of Agbiz, recently noted that it is still cheaper to import soya beans to Cape Town from Argentina than to transport them from South Africa's inland regions. According to the latest Ctrack data, South African freight volumes and overall activity have continued to deteriorate (from 2024 to end Q2 2025). Transnet is lining up public-private partnerships, but private sector "railing" operations are only expected to begin in 2026/27 at the earliest. According to Dr Sean Phillips, Director-General of the Department of Water and Sanitation, municipal debt owed to water boards tripled from 2018 to July 2025, reaching R24.58bn.

US reciprocal tariff rates for many neighbouring economies were reduced substantially in August from initial levels announced on Liberation Day, but South Africa's rate has remained unchanged from April. Standard Chartered believes this could reduce GDP by as much as 0.3 percentage points – significant when GDP is only expected to grow by 1%. Productivity remains key to improving SA growth. President Cyril Ramaphosa has acknowledged the significant challenges facing SA's public services, including a skills gap, outdated systems and processes, inconsistent service delivery and corruption. On the upside, reform momentum is at its highest level in over a year according to the Business Leadership SA tracker, and 26 of 240 reform deliverables have been marked as complete to date.

This year's upside growth surprise is due to tariff hikes occurring more gradually than expected, with the observed US tariff rate only reaching 9.7% in July. As front-loading spending in the US slows, a weakening of labour income will occur just as tariffs squeeze purchasing power, with the effective tariff rate expected to reach 19% by year end. US real labour income is thus projected to decline in the coming months. Despite slower employment, inflationary pressures from tariffs and immigration-driven wage increases pose significant risks that could prematurely end the Fed's rate cut cycle. Investment lead growth is supporting the economy for now and the Atlanta Fed's GDPNow model is spiking, suggesting GDP growth could reaccelerate to 3.3% in Q3. Cheaper energy, a weaker dollar, lower equity earnings yields and narrowing credit spreads are all stimulative for business activity.

Geopolitical noise and risks remain high. The oil price spiked after Trump reversed his stance on Ukraine, writing on social media: "I think Ukraine, with the support of the European Union, is in a position to fight and WIN all of Ukraine back in its original form." Poland shot down 19 Russian drones that entered its airspace during a massive Kremlin airstrike on Ukraine, calling the trespass an "act of aggression". Polish Prime Minister Donald Tusk subsequently invoked NATO's Article 4 to consult allies on collective defence measures. Lithuanian President Gitanas Nausėda warned Russia over the recent entry of three armed Russian fighter jets into Estonian airspace and a series of incursions along the Eastern part of the NATO alliance countries.

Markets are very stretched and pullbacks are likely due to geopolitical risks or inflation. The Fed continues to provide liquidity, and fiscal stimulus is much stronger than it should be at this point in the economic cycle, which suggests that any pullbacks will be shallow.

### RISK PROFILE

### TIME HORIZON

### Fund performance

The Sygnia Transnational Equities Fund delivered 7.1% for the quarter, below its benchmark, the FTSE/JSE All Share. The fund benefitted from exposure to Prosus NV, Gold Fields Ltd and AngloGold Ashanti PLC, while its exposure to Anheuser-Busch Inbev SA, Bid Corporation Ltd and Shaftesbury Capital PLC detracted from performance.

There were no changes to the tracked index's constituents over the period.

Remaining committed to its core investment objective, the fund continues to pursue sustained long-term capital growth by strategically investing in stocks with substantial international revenue streams.

### Disclaimer

Sygnia Collective Investments RF (Pty) Ltd is incorporated and registered under the law of South Africa and is registered under the Collective Investment Schemes Control Act, 2002 (Act No 45 of 2002). The company does not provide any guarantee with respect to the capital or return of the portfolio. Nothing in this document will be considered to state or imply that the collective investment scheme or portfolio is suitable for a particular type of investor.

## Important information to consider before investing

### Investment Objective & Strategy

The Sygnia Transnational Equities Fund is a unique investment vehicle designed for South African investors who are limited by regulation from investing more than a specific amount offshore. The fund is actively managed and invests in JSE-listed equities that have a predominant offshore revenue exposure, providing investors with exposure to diversified global growth opportunities. This can be a valuable asset for investors who are concerned about the potential for South African growth to stagnate.

### Balancing Risk and Reward

This fund has a 100% strategic allocation to South African equities but may include some allocation to offshore equities. The risk of financial loss over the short term is therefore high. The risk is managed by spreading investments across sectors and individual shares. The high offshore revenue exposure diversifies the source of growth impacting the securities but also introduces currency risk.

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily an indicator of future performance. Performance data for the index is available from the JSE and is also available through many daily financial publications and websites. Unit trusts are traded at the ruling price and are allowed to engage in borrowing and scrip lending.

Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage. Performance is calculated for the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date.

### Fees

Sygnia charges an annual management fee comprised of applicable basis fees paid to underlying managers and Sygnia's annual service fee. The fund may invest in other unit trusts (underlying funds) that levy their own charges and which may charge performance fees in the event that the underlying fund's performance exceeds its benchmark. A schedule of fees and charges is available on request from Sygnia. Permissible deductions may include management fees, brokerage, levies, stamps, auditor's fees, bank charges and trustee fees. Sygnia does not provide advice and therefore does not charge advice fees.

### What is the Total Expense Ratio (TER) and Transaction Costs (TC)?

The total expense ratio (TER) is the annualised percentage of the fund's average assets under management that has been used to pay the fund's actual expenses over the past three years. Transaction costs are a necessary cost in administering the fund and impact fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since fund returns are quoted after the deduction of these expenses, the TER and Transaction Costs should not be deducted again from the published returns. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return.

### Cumulative Investment Performance

Cumulative investment performance is for illustrative purposes only. The investment performance is calculated by taking all ongoing fees into account for the amount shown, with income reinvested on the reinvestment date.

### How are unit prices calculated?

Unit prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio, including any income accruals and less any permissible deductions from the portfolio, divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 15:00 each business day. Purchases and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. The price shown is specific to this class. The fund size represents the portfolio size as a whole. Unit prices are updated by 10:00 every business day and are available on our website, [www.sygnia.co.za](http://www.sygnia.co.za).

### Disclaimer

The fund may be closed to new investments at any time in order to be managed in accordance with its mandate. Sygnia Collective Investments RF (Pty) Ltd is incorporated and registered under the laws of South Africa and is registered under the Collective Investment Schemes Control Act, 2002 (Act No 45 of 2002). Sygnia Asset Management (Proprietary) Limited (FSP Registration No. 873), an authorised financial services provider, is the appointed investment manager of the fund. Sygnia Collective Investments RF (Pty) Ltd does not provide any guarantee with respect to the capital or return of the portfolio. Nothing in this minimum disclosure document will be considered to state or imply that the collective investment scheme or portfolio is suitable for a particular type of investor.

This document is for information purposes only and does not constitute or form any part of any offer to issue or sell, or any solicitation of any offer to subscribe for or purchase, any particular investment.
